137

地球の半径をRとする。

$$T^2 = \frac{4\pi^2 r^3}{GM} \sharp \mathfrak{I},$$

$$T = T$$
 , $r = R$, $T = T_m$, $r = 60R$

を代入して、

$$T^{2} = \frac{4\pi^{2}R^{3}}{GM} \qquad \cdots 1$$

$$T_{m}^{2} = \frac{4\pi^{2}(60R)^{3}}{GM} \qquad \cdots 2$$

$$T_m^2 = \frac{4\pi^2 (60R)^3}{GM} \qquad \cdots \text{ (2)}$$

$$T^{2} = \frac{1}{60^{3}} T_{m}^{2} = \frac{1}{2.16 \times 10^{5}} T_{m}^{2}$$
$$\therefore T = 2.2 \times 10^{-3} T_{m}$$

$$\therefore T = 2.2 \times 10^{-3} T_m$$
